Preface

In this section the teacher states his/her philosophy and vision of teaching and academic lifetime.

All sciences are rapidly expanding in type and quantity of information . This of course is largely applicable to medicine .

using the classical teaching method is no longer suitable ,as all these sciences are improving . It is a priority to improve the medical colleges teaching system to deliver not only knowledge but skills and behavior needed to complete the objectives of graduating a competent doctors.

I believe that teaching is an art ,and that medical education is a special entity ,

Medical education should have three main pivots : knowledge, skills and attitude I think that we need to concentrate at the later two because students need that. I believe that the objectives are what the student learned at the end not what the teacher give.

I believe that student should change their thinking from memorization learning(superficial thinking) which they were accustomed to during whole early life to deep critical thinking .

They should improve their communication skills and attitude . teaching should be changed from teacher centered to student centered, and from subject based to a problem solving teaching
